

Job Application Pack – Technician

We have vacancies for technicians to work on initially a casual basis, with the possibility of building up to a full time position for the right person.

Llani Solar is a small but busy and expanding renewable energy company, specialising in solar and heating technologies.

Please read the following job description and person specification. If you are interested in applying for the position, please send us a CV and covering letter. Please include information on the skills that will enable you to fulfil this role within Llani Solar.

The application deadline is by 2nd May with interviews taking place on 9th/10th May. We will contact you by phone or email should we wish to interview you.

Salary: Will be in the region £9.50/hr plus depending on experience.

Job Location: Llanidloes, Mid Wales

Hours of work: You are required to work flexibly from Monday to Friday according to the nature of the work available. You have no set hours but you can normally expect to work from 7.30am to 5.30pm each day. Normally weekly hours range between 25 and 48 maximum. However early starts may be required for travelling, and late finishing, shorter days and overnight stays can also be expected to accommodate customers' needs.

Purpose of job: To install solar and renewable energy heating systems efficiently and professionally in accordance with the Employer's aims and policies

Principle duties: To install solar and renewable heating systems efficiently and professionally to the highest possible standards.

- To be responsible for the safe method of work and correct installation.
- To prioritise tasks and duties to maintain the site in a presentable manner.
- To liaise with clients, and other professionals working on site.
- To ensure that customer's property is protected and that minimal disruption is caused.
- To be able to drive a company vehicle
- To maintain and ensure that all equipment is in working order and to report any damage, breakage or malfunction.
- To maintain clear and precise records of all statutory law requirements in all installations, such as H&S.

- Undertake all training, meetings and appraisals when appropriate
- To undertake any further reasonable duties which may be deemed by Llani Solar to be in keeping with the job

Llani Solar Company Profile:

Llani Solar Ltd commenced its operations by concentrating on the supply and installation of solar water heating systems. It built on the long experience of the founding director in the industry and quickly became Wales' leading installer of solar thermal technology, having installed 65% of all Low Carbon Building Program grant assisted installations in Wales (May 2009). It is also one of the largest specialist installers of solar thermal in the UK.

As a result of demand from its customers and also an expanding domestic market Llani Solar expanded its range of services to include wood fuelled heating systems and heat pumps (air source and ground source) and solar photovoltaics. By careful product selection, the use of the best materials and standards of workmanship, and a system tailored to any situation, the company will install a system that will provide low or zero carbon heating or solar solution.

Llani Solar is one of the few companies in the UK that specialise in renewable energy for heating and is committed to providing a service that is second to none at very competitive prices. Systems are available to provide heat for domestic and commercial situations. Llani Solar Ltd. will give independent advice and recommend the best system to suit the home or business.

The Company's objectives for success is built on the established virtues of quality, service, value for money, and health and safety.

Our hallmarks of distinction are:

- A high level of direct, hands-on involvement by the company's senior management giving the reassurance of personal service and attention;
- The professional management of health and safety guaranteeing compliance with legislation and codes of good practice;
- Carrying out our operations in a way that not only protects the environment but enhances it through reducing the carbon footprint of buildings.
- Provide training to enhance our employees skills

In addition, the company is fully accredited under the Government-backed Microgeneration Certification Scheme (MCS), enabling our customers to applying for RHI and FIT, or any grants or funding that might be available. The company is a member of the Renewable Energy Association and has signed up to its REAL Assurance customer protection scheme. The company is a member of the Construction Health and Safety Scheme (CHAS) and Construction Line which enables us to install public sector projects. The company is also a registered HETAS installer, confirming that we have been trained and assessed in safety and good practice for solid fuel appliances.
